# Proposal: Sunshine Paws Animal Rescue

## 1. Organisation Overview

Sunshine Paws Animal Rescue is a non-profit organisation located in Pretoria. The organisation helps stray and abandoned dogs and cats, takes care of them, and helps them find loving homes.

The organisation was started in 2019 by Naledi Mahlangu. It gets most of its support from donations and a small group of volunteers. Currently, Sunshine Paws does not have a website, so most people learn about the organisation through word of mouth and local Facebook groups.

The mission of Sunshine Paws is to give abandoned and injured animals a chance to have a safe and loving home. The vision of Sunshine Paws is to create a Pretoria where no stray animal is left to suffer on the streets.

The main target audience includes people who want to adopt or foster animals, people who want to report stray or injured animals, and donors who want to support the organisation.

## 2. Website Goals and Objectives

The main goal of the website is to help more people learn about Sunshine Paws Animal Rescue and make it easier for people to support the organisation.

The website will allow visitors to view animals that are available for adoption, make donations, report stray animals, and contact the rescue centre. The website should be simple and easy to use so that visitors can quickly find the information they need.

The success of the website will be measured by the number of adoption enquiries, online donations, and reports of stray animals that are received through the website.

## 3. Current Website Analysis

This section is not applicable because Sunshine Paws Animal Rescue does not currently have a website. The proposed website will therefore be a brand-new website for the organisation.

## 4. Proposed Website Features and Functionality

The website will have different pages to share useful information with visitors. The Home page will introduce Sunshine Paws Animal Rescue and explain what the organisation does.

The About Us page will provide information about the organisation, its history, mission, and the people who help run it.

The Adopt a Pet page will show animals that are currently looking for homes. Each animal will have a picture and a short description to help visitors learn more about them.

The Donate page will explain how donations are used and provide an easy way for people to support the organisation.

The Report a Stray Animal page will allow visitors to share information about a stray or injured animal. They will also be able to add a picture and other important details.

The Contact page will provide the organisation's phone number, WhatsApp details, and location so that people can easily get in touch.

## 5. Design and User Experience

The website will have a friendly, simple, and welcoming design. Soft yellow and teal will be used as the main colours because they create a positive and caring feeling.

The headings will use a friendly font, while the main text will use a simple font that is easy to read. The website will have a menu at the top so that visitors can easily move between the different pages.

The website will also be designed to work well on mobile phones. Large and clear pictures of the animals will be used because pictures can help visitors connect with the animals and encourage them to adopt or donate.

Buttons such as “Adopt Me”, “Donate Now”, and “Report a Stray” will be easy to see so visitors can take action quickly.

## 6. Technical Requirements

The website will be built using HTML, CSS, and some JavaScript. HTML will be used to create the structure of the website, CSS will be used for the design, and JavaScript will be used for some interactive features.

The website can be hosted by a South African company such as xneelo or Afrihost. A .org.za domain, such as sunshinepaws.org.za, would be a good choice because the organisation is a non-profit.

## 7. Milestones

The project will take two months to complete. In the first month, the main focus will be on planning the website, creating the wireframes, designing the layout, and building the Home and About Us pages.

In the second month, the Adopt a Pet, Donate, Report a Stray, and Contact pages will be created. Once all the pages are completed, the website will be tested to make sure everything works correctly. Any problems will be fixed before the website is finally launched.

## 8. Budget

The cost of the website will mainly include the domain and hosting. A .org.za domain is expected to cost around R150 per year. Hosting can cost between R108 and R1,000 per year, depending on the package that is chosen.

Since this is a student project, there will be no development costs. The final cost will depend on the hosting package selected.
